### **DETAILED ACTION**

This Office Action is in response to the filing of the preliminary amendment on 28 January 2005.

#### ***Drawings***

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "22" has been used to designate both integrated circuit and cover. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2822

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-3,5-10,12-15 and 17-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Reeh et al. (U.S. Patent 6,812,500).

Reeh discloses a light radiating semiconductor device (Fig. 3) that contains a semiconductor chip with a transparent plastic window portion of the housing, a protective coating on the window portion permitting transmission of light of a wavelength of around 400 nanometers through the window portion while protecting the window portion from deterioration by produced ozone which is produced by the light of a wavelength of around 400 nanometers and an optical detector (light sensitive device) (1) in the package, where the light that enters is in the range of 400-780 nanometers (Column 5, lines 18-27), where the optical detector and package are an optical reader in a optical storage system

The plastic window is clear epoxy mold compound; the protective coating is silicone oxide (Column 4, lines 10-15 and Column 14, lines 29-40)

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4, 11 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Reeh.

Reeh discloses all the limitations except for the thickness of the protective coating being  $\frac{1}{4}$  to  $\frac{1}{2}$  the wavelength of light. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the thickness of the protective coating to be  $\frac{1}{4}$  to  $\frac{1}{2}$  the wavelength of light, since it has been held that where the general condition of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233. (1955)
